

## DORIS FINNEY

Dear Friend, I am a public health nurse in Velarde and vehemently opposed to the permit modification being considered by the NMED. We have many issues related to this waste in communities close to the lab. We are experiencing record numbers of health issues and are requesting the waste of radioactive material be removed in a timely fashion. We have experienced fire, earthquakes, in recent years and live in fear that a radioactive release will occur with no warning and we are not prepared with so few hospital beds and doctors up here. Please advise on emergency preparedness and please do not modify the permit or removal of all the waste stored up the hill for the last many, many years. DeeFinney@zianet.com
