

Susan Gerber

I am writing in support of New Mexico's requiring the U.S. Department of Energy to move the accumulated "legacy" waste it has stored at Los Alamos National Laboratory by updating the permit for this. The danger of keeping it there is too great, as was shown by the amount of radiation from the 2014 drum explosion at WIPP. Please take this action to reduce the great risk New Mexico is facing under current circumstances. Thank you. -Susan Gerber
