

Angela Ramirez

Regarding the NMED AIM Draft Permit, I urge you to modify the hazardous waste permit to require Los Alamos National Lab to immediately begin removing its nuclear waste accumulated since 1943 and to complete the clean-up within ten years. The contamination is getting into the soil, wells, reservoir and aquifer. Haven't New Mexicans suffered enough, being the dumping ground for America's experiments? And it seems as if those in power really do not care about us peons.
