My name is Kim Crickard. I worked as an electrician at a nuclear power plant in California years ago. It was very poorly run, and the threat of nuclear waste in populated areas concerns me greatly. You obviously are running your project just as badly as it is my understanding that you are storing nuclear waste in metal vats with the "protection" of tents over them. This is ridiculous and damn cavalier of you to treat this highly toxic waste as you have. You endanger the people of this area particularly since this area is at huge risk for fires due to dry grasses and strong winds. You also endanger wildlife and our water table. Put this stuff ELSEWHERE!! It does not belong here, and with a 100,00 year half life, it is a ridiculous decision to store it anywhere near a populated area. STOP IT!
