

## Lynda Burger

We are EXTREMELY LUCKY that no radiation has yet been spread across New Mexico land by a wildfire reaching the legacy waste at LANL. NMED is trying to keep it that way by making a stronger permit and forcing DOE to abide by it, AND PRIORITZE MOVING THE WASTE immediately, which is what is needed to prevent nuclear disaster in the whole north central region of New Mexico surrounding LANL. Given time, a wildfire will reach the waste. We support NMED, and demand that DOE comply, and get the waste moved to WIPP!
