

Jonathan Chandler

WIPP is the only transuranic waste of this type in the country. It is the safest place for this waste. You have a community that supports the work being done and understands the importance this facility brings to the country. Limiting in the way you are suggesting will only further make New Mexico a place that is unfriendly to business and to the health of our nation. Would you rather have it on surface lots and less protected? Please be smart about this and know that this is what our country needs to do.
