PERMIT (draft) the AGENCY INITIATED MODIFICATION (AIM)

For the following reasons:

There is a need for permit modification due to lack of taking responsibility for the legacy waste in tents in a high fire danger zone at LANL.

DOE is not doing its job removing legacy waste from LANL as it agreed. DOE's noncompliance requires permit modification. AIM holds DOE accountable for removal of specific character of legacy waste removed both in terms of quality and quantity and measured against shipments from elsewhere to WIPP.

The modification establishes accountability with consequences should DOE continue to not take responsibility. The DOE will be held accountable.

It's better to take care of this now. We do not want another Beirut docks fertilizer explosion of 2020.

What is similar to the Beirut harbor explosion of 2020 and a Fire on the Mountain igniting the tents:

People knew and did nothing about it. Fertilizer sat on the docks, for years. Letters of protest submitted. No one did anything to remediate. No one took responsibility before it occurred.

Beirut wikipedia

<https://www.bing.com/search?q=wikipedia+beirut+blast&form=APMCS1&PC=APMC>

Similar to Beirut, there will be indictments after.

Heads will roll.

Whose head will roll when the legacy waste tents ignite?

Whose names will be read in the indictment?

Your name?

Department of Energy?

Not Governor Lujan Grisham

Not the New Mexico Environment Department

Not Secretary Kenney

2. What is dissimilar about the Beirut disaster is the cost. The human cost to Beirut has been verified and substantiated.

3. The cost of Fire on the Mountain igniting the tent is incalculable.

The spread of radio active ash around the globe is not inconceivable. How far away would people be safe? Would this ash come back to you in climate-change winds? Plutonium lives forever.

You have been informed.

What is your response?  
DOE accept a modification today  
Thank you

Sharon Argenbright
