

## Tracy Wallace

The document, Concrete Batch Plant Standard Permit 2023 - RPN 2022-033-OTH-NR is not loading from your website when I click, "Review Documents". I want to see restrictions that concrete batch plants must be within a half-mile radius of where the concrete will be poured, thereby, putting these in the neighborhoods that the concrete benefits. Neighbors in low-income neighborhoods are weary of the excuse that real estate is too expensive to rent for concrete batch plants in wealthier neighborhoods while simultaneously using the excuse the concrete must be close enough to not set. Too bad. If wealthy neighbors including businesses want the benefits this development brings, then they need to pay the environmental price that low-income neighbors have been paying with their damaged health for decades. Situating concrete batch plants in neighborhoods that benefit from the development where concrete is used is just, fair, equal. TCEQ is not even near equality much less equity on the issue of concrete batch plants near the neighborhood that benefits from development.
