Regarding TCEQ's rule number 2024-027-113-AI: I'm urging you to please take stronger action to limit methane pollution from the oil & gas industry, As a Tarrant County resident, our proximity to so many drill and fracking sites gives me deep concern for the health of myself, my family, and the future of my family. When looking for where to buy a home, I saw how many sites were in Arlington and the prevalence of health issues like childhood asthma and certain cancers. It deterred me from living in the thick of it and investing more in these areas of Arlington. I'd love to have kids with my husband and we worry about health here given the lack of enforcing rules to keep our air safe. Tarrant County has one the highest rates of childhood asthma both statewide and nationwide, with almost 1 in 4 children suffering from asthma. This is not a future I want for my family. Unfortunately it's already a present reality you are creating for many of us. For our health, please develop a state plan that is **at least** as protective as current EPA standards.
