

Alan Moore

I need your fake OSSF experts to stop approving conventional septic systems in counties with completely non-compliant separation distances from the 'water-table' in accordance with 285.30(2)(A). Keith Miles is the idiot we are forced to interact with & he is disgusting. He is allowing relators to sell homes with conventional septic systems on land with 0 cm of soil above the NRCS water-table. I get 48 hour fevers from whatever is growing in the cesspool-soil here. I tried only mowing right before the rains but it is not enough, I tried wild-flowers instead of grass but pulling weeds releases an ammonia smell from the oxidizing pollutants in the soil. I've had a septic permit since 2006 but complaining about a totally illegal OSSF Nextdoor is a process that will have some evil-retards from the sheriff office attack us. I feel bad that they don't understand the untreated-sewage is all over our environment but I didn't create this problem that the Clean Water Act from 1972 should have resolved it didn't & required more in 1989. It's 2025 & the Health Department here in Montgomery County Texas is total trash, they make our neighborhoods worse. What my issue is has a very old understanding, drainage is literally on every government website... but all we get offered is OSSF insanity. The floating effluent is riding on our high SHWT & converting into surface water everywhere. If this issue was to be eliminated in 1985, didn't work so more was added in 1989... but I get arrested for harassment by some untreated-sewage covered gunmen in a uniform that represents dishonesty & dishonor for what they do to the people out here. They lie & feed everyone nonsense so that they get more gun crimes, I know b/c people point guns at me enough to not have any other view of them. I absolutely hate interacting with friendly neighbors who don't realize their brain is slow b/c they have sewage germs in their blood. Just the other day one realized his dog was acting sick but it was because we dug a hole in his yard that is contaminated by the non-compliant SHWT violating conventional septic systems around his land. The neighbors across the street claimed to have possibly spent \$8k to repair their conventional septic system on land with 0 cm of soil on the water-table(SHWT), within 2 years the gray water pit approved with no-OSSF-permit by whatever trash relators use as OSSF inspectors is caved in. I told him not to repair it & to buy a modern aerator system for his own health. Sending them to Keith Miles is an act of terrorism b/c he wants them sick & probably dead.

In the file uploaded is an image from NRCS showing what my complaint is & why I view my health department as a group of terrorists.
