

## Alfredo Enrique De La Riva

I would like to start by pointing out the obvious of how precious water resources are, and how scarce they are in the Spring Branch area, as more and more communities develop, the need for ground water increases exponentially and some residents, like myself, my next door neighbor and a few hundred people more, find ourselves with our wells running dry, I am positive that with the great demand of water APOs use, it will be a dire situation in which we will find ourselves with less and less water every day. I understand that as important development is, you need to take into consideration the people that already live here. If worse comes to worse, please have these companies bring water from other sources other than the imitate sub floor, and have them take on the cost that we have to pay when getting water hauled in to replenish our storage tanks. I know money and growth is a big motivator for any agency, but please take heart in the residents that you affect.
