

## Randy Penick

I am writing to express my support for the Copper World Project, particularly impressed by the innovative approaches Hudbay plans to implement. We need to keep the copper industry alive here In Arizona. Their commitment to using cutting-edge technology to ensure environmental protection, especially in terms of water resource management, sets a new standard in the industry. It is crucial for ADEQ to recognize these advancements and support such progressive initiatives by granting the necessary permits.

Sincerely,

Randy Penick
