

Kent Frantzve

I am writing to advocate passionately for the approval of Hudbay's Copper World Project's Aquifer Protection Permit. This project not only stands as a beacon for responsible mining practices but also holds profound significance in the realm of green energy. Copper, an essential component in renewable energy technologies like wind turbines, solar panels, and electric vehicles, plays a pivotal role in our transition towards a sustainable future.

Granting the Aquifer Protection Permit to Hudbay's Copper World Project not only fosters economic growth but also contributes to our collective efforts in achieving a greener and more sustainable world. I urge your support in recognizing the dual significance of this project: its economic potential and its crucial role in supporting renewable energy infrastructure through copper production.

Sincerely,

Kent Frantzve
