

Ernest Wittenbreder

It has been pointed out by reliable sources that Copper World did not properly calculate its proposed mine's potential emissions. Is this by intention or ignorance, or both? Shame on ADEQ for allowing such a sham to continue. Besides toxic emissions poisoning the air we breathe, our air quality will also be degraded by the toxic dust clouds from the proposed hundreds of acres of tailings piles. ADEQ is ignoring the fact that we have housing communities and schools directly in harms way. ADEQ needs to show more concern for our citizens and less for a foreign corporation looking to make a big profit.
