

Charles Dunn

Tucson is growing fast and communities are directly in the "blast zone" of this project.

There is an obvious degradation of quality of life associated with this project, including huge air quality issues. I live in the foothills and can see the toxic wind blowing from existing open pit mines and dumping grounds across Green Valley and up into Tucson. Add to poison air, add diesel emissions 24/7.

Seldom discussed is the massive noise pollution from the tons of explosives destroying our "Wild & Scenic" Santa Rita Mountains. Madera Canyon is a national treasure within earshot of this project. With this project our wildlife will disappear including the black bears, turkey, elk and deer and world class birds in the area.

Antiquated rules are no excuse to approve this abomination of a project.
