

Wanda Poindexter

I and my family believe Arizona Department of Environmental Quality (ADEQ) should require a Class I permit for Hudbay's Copper World Air permit, with stricter regulations that would help protect people and the environment from air pollution.

Hudbay is requesting a Class II permit, which is not sufficient for protecting human health, considering the high level of air pollution that would be created by the mine.

Please support the strictest regulations to protect people and animals. Thank you.
