

## Wayne Harrington

This permit needs to be rejected in its entirety. The deficiencies in this permit are many. The oversight is suspect. The community confidence in Hud Bay and Copper World going forward with this project complying with clean air and safe water standards is nonexistent. If this project is allowed to go forward all the residents, animal and plant life will pay an enormous price for a commodity that has highs and lows on the New York stock exchange. You know what doesn't have highs and lows? The Santa Rita mountain range if this project moves forward. There will only be lows for as long as humans walk this earth! The commodities ripped from this historically significant natural mountain range will be irrelevant compared to the damage to humanity. The environmental variations in genetics will be passed on for generations. The damage to plant and animal life will be permanent.

As I contemplate this project and its impact on this entire region I'm left wondering ♦ has this incredible gift of this one of a kind planet been wasted on a self-serving people.

Be brave, be grateful, be insightful and deny this permit application.
