

Jean Strother

I don't have any "technical data". All I have is a very strong "gut feeling" that this mine will always be a great potential health hazard to the people living in the surrounding area. We are not some model. We are living, breathing individuals. Those of us who live in the area know that winds can exceed 45 miles per hour. How can Copper World prevent that? How can Copper World mitigate that. How can Copper World protect us? The answer to all three is it can't no matter what ADEQ's "model" states or Rosemont says. Averages don't matter. Probabilities are irrelevant. However, potentialities are real. Our health should not be sacrificed in the name of financial gain for a foreign company and relatively few jobs for locals.
