

Philip Maloney

I strongly urge you to reject the proposed air-pollution permit for the Copper World mine. As it is currently drafted, the proposed permit does little to ensure the mine protects our air or environment. Instead, it gives the mine a free pass to pollute.

The draft permit would allow for the construction of a massive open-pit mining operation in the Santa Rita Mountains south of Tucson. Daily operations will include blasting, ore crushing, processing, and the construction of a sulfuric acid plant. These activities have the potential to release thousands of tons of toxic air pollution every year, threatening public health and the environment.

I'm especially concerned that the permit contains the following deficiencies:

It exempts the mine from compliance during malfunctions, startups, and shutdowns. If the mine can't comply at all times, it shouldn't get a permit to pollute.

It fails to require actual monitoring of emissions from all sources to ensure compliance with all limits. Monitoring must be required to ensure compliance.

It lacks specific terms and conditions to ensure the enforceability of all emissions limits.

It inappropriately classifies certain emissions sources, like ore processing, as "fugitive," allowing the mine to avoid more stringent permitting and pollution-control requirements.

In short, it doesn't make sure the Copper World mine will fully protect the air we breathe.

For these reasons and more, I call on you to deny the permit application.

At an absolute minimum you must require the Copper World mine to obtain a Class I permit, which imposes more stringent requirements to control emissions, ensure monitoring, and ensure more extensive public involvement. A Class I permit is necessary so that the mine is **always** accountable for limiting its air pollution and protecting the environment — no exceptions.
