

Tom Murphy

I strongly support the issuing of the air permit by ADEQ. We are the Copper State for a reason. There is no country in the world or state in the U.S., that would provide better oversight where it pertains to environmental concerns or protections than ours. Hudbay is proposing a 21st Century mining operation. They will be using the latest new technologies to mitigate environmental concerns. Copper is a critical mineral and component to all of the green technologies that everyone is aspiring for. I do not believe it is right or fair that it has taking so many years to get a mining operation going in an area that has been mined in previously. Please approve this permit and we can bring good high paying jobs to our area and copper to the market. Thank you.
