

Gina Eaton

How can the community trust ADEQ and ADI with all the citations/lawsuits against ADI that have been acquired over the years?

How can you guarantee the community there will be no "accidents" with all the funding being cut at ADEQ?

Let us be clear and 100 percent real, the community's health. I believe the scientific research shows everyone who lives within range of these smelters the community health takes a drastic turn for the worse. How will you assure us our health will not be affected by this smelter?

Lastly, per the Representative for ADI he said, "it would only smell like a fart." (He is on camera saying this). So to sum up we will have a wonderful smelling community.

Have any environmental studies been done on water pollution, light pollution, and the effects this will have on the children in the nearby schools?
