

Crystal Anderson

Hello, I'm submitting videos of how the dust storm came through Benson, AZ August 31st, 2025. The dust came from the Wilcox/dragoon area and blew through Benson, the ADI site and the large density of neighborhoods next to the site.

I am against Aluminum Dynamics building a SECONDARY smelter because this shows how their hazardous materials/particles/chemicals will spread throughout the town on a windy day! I do not want their hazards blowing into my house from the back door! I do not want their hazards settling in my yard and contaminating my soil, garden, or water.
