

Crystal Anderson

This video is of the moisture in the morning on September 5th, 2025.

This shows how in a valley, everything sits, especially when it's cold. You can see how the moisture is just sitting over all of the fields and homes, not just the river.

This is a visual of how the hazardous particles/materials/chemicals from Aluminum Dynamics SECONDARY smelter will simply sit over our land and homes. WE ARE IN A VALLEY. The air dispersion modeling report provided is not for a valley! I am requesting real time air dispersion for the proposed plant site.

I request that no decision on the air quality permit be made until tests for air dispersion modeling are done physically at the site!

Please extend the comment period until we can see the results from an environmental test AT the proposed site and also an air dispersion modeling report is done AT the proposed site, not from sources in Tucson.

We are in a valley! Do the tests in the valley!

The people in this area don't deserve to be guinea pigs. We deserve real tests and real answers!
