

## Mary Hunt

We own property on the east side of the San Pedro River. We have read that this type of plant will emit hazardous toxins into the air affecting the soil and water. These toxins will have a negative impact on the residents and wildlife of Benson and the surrounding area. If this proposed facility is allowed to operate, there must be continuous pollution monitoring and pollution data must be made available to the public. This is one more out of state company that is going to damage the fragile environment and affect the health and well being of Cochise County residents. All in the pursuit of economic growth. As property owners, we are AGAINST this facility.
