

Ricardo Bautista

I work in farm labor with my mom and many times we go into work and the other field close to where we work smells what I think is pesticide. One time while we were working they sprayed and they only had us move a few feet from the spray site and we can still smell it. People like me can still smell it and get dizzy we feel sick. The stuff they spray also causes skin irritation and itchy eyes. Having to deal with the heat as well as trying to move through places where pesticides are sprayed.

I'm in Fresno County
