

Araceli Anonymous

Public comment I ask you to please inform us about the exact location when there is going to be a pesticide or fumigant applied. This is important and affects all of our community because we are exposed to these pesticides. Two of my daughters have asthma and they get very sick and depend on inhalers. This is very frustrating to have my family live like this and all of our family has allergies and sometimes very strong and affect our quality of life.

my children have had to endure many hundreds of poking in order to get tests and find out what their allergic to and have to go once a week in order to receive shots to help improve effects of things in the air in our community. Please don't think of only the financial gains but also put as the most important factor what will keep our communities healthy or make us sick
