

## Beatriz V. Diaz

To whom it may concern @ DPR,

It is with great sadness to say that my father died due to pesticides he worked in the fields and while working in the fields pesticides were being sprayed by plains over the field workers heads feeling the mist of pesticides while the plains were spraying pesticides plus other times going into fields in less than half hour of fields being sprayed. When Drs. diagnosed our family that Dad had Cancer we asked Dr. Gish if this could be due to pesticides that were being sprayed in the fields. Dr. Gish response was possible but it would be hard to beat the system. My dad passed in 1989.

I am now caring for a dear friend of mine that has been diagnosed with breast cancer and sad to say one of her breast has been removed due to the cancer. She has been given 3 weeks + of life. She is in her last days of her life I asked the same question to her Dr. can this be due to pesticides I got the same response as I did for my Dad. My dear friend worked in the grapes and many other farm working fields.

Please, please find it in your heart ♥ that PESTICIDES is killing to many lives. I am begging you in order to save Lives we need the exact location where PESTICIDES are being sprayed.

Enough with all this deaths due to PESTICIDES.

My nights are sleeplessness because I don't know when my friend will take her last breath all because of this STUPID PESTICIDES!

Asking 'ers for her.

Thank you,

Beatriz V. Diaz
