

Ana Barrera

I am concerned that my phone and e-mail are locked on one account as I was attempting to get information for both my work and for home. My work email for my work site as I am a teacher at a school that sits across three fields within 1/4 mile. I need to also get the notification to my personal email for access to the information via my cell phone but all my notifications go to my work email. I also live within 1/4 mile from the same three fields that sit across my work site. Make a system where the cell phone can also link to two separate emails. Also there have been notices of specific pesticides being used at 7 am across schools but the Ag Commissioner explained that they are allowable applications depending on whether they are placed with backpacks. Can details be placed on the application to explain why Chlorpyrifos is being used after 7am on a week day. Can you also highlight on maps school sites to allow all stakeholders to take special consideration especially when schools are open on weekends and after school hours past 9pm for school events. As you release data on spray days can you also start placing air monitors in areas that are registering higher usage as is the case of Monterey County. To monitor exposure levels in areas that have higher use of pesticides and Organophosphates.
