

Stephanie Lusak

FOE-1; I have personally experienced the death of two of my original and partners , from cancers that may or may not have been caused by pesticide exposures in the 1970's in our area. While it is difficult to say how this exposure affected them, I am sure that it was a contributing factor to their demises at an early age. They both died in their early 60's. It is insidious and deadly and must not be allowed to continue to cause cancers and early deaths .
