

Jenny Broome

Scientific advisory committee should have someone with a medical (MD) and epidemiology (MPH) advanced degrees, not just someone working in public health as it seems is currently stated.

Additionally, a researcher with experience developing real world alternatives to high-risk pesticides, in disciplines such as plant pathology, entomology, weed science, nematology.

The process to prioritize high risk pesticides should somehow include assessment of who is exposed to the risks in real world use and also that multiple risks may be experienced in the environment.
