

Jasmine Reyda

Please do not allow anticoagulant rodenticides to be used in California for non-emergency/nonpublic health reasons. These rodenticides damage and can potentially destroy ecosystems by killing hawks, owls, kestrels and other birds of prey. These birds are critical to controlling rats, gophers, mice and voles. It will also endanger pets and other mammals. If these rodenticides are allowed, it could be creating an explosion of rodents that will become much harder to control in the future.

Please do not rollback AB 1788, AB 2552, or AB1322.

Please stop this insane idea.
