Do NOT roll back regulation on bioaccumulative, anticoagulant rodenticides. AB 1788, 2552, and 1322 were passed with the will of the California public to restrict the use of these chemicals that are deadly to predators, pets, and raptors, and use ecologically balanced solutions to control rodent populations instead. Not only do these rodenticides kill indiscriminately; allowing 100 consecutive days of their use adds insult to injury. There is NO emergency. You are legally obligated to protect wildlife and you MUST follow the law.
