

## Angela Giannini

Please do not allow these types of poisons for rodents because other animals such as owls, cats, coyotes, mountain lions, hawks etc can eat the rodents then they can die.

We personally use Clark's pest control and they set the old fashioned traps.

Also we put out the rodent birth control "treats" . Both these efforts have helped . But our neighbors still have much ivy. I would like to see a ban on planting ivy, and having counties use rodent birth control as wide spread efforts.
