

## Carla Din

I am a lifelong California resident who supports a total ban on anticoagulant rodenticides. Not only do they cause horrific pain and suffering to rodents, they pose a significant risk to non-target wildlife and pets. These poisons harm the ecosystem, disrupt natural food webs, and can lead to secondary poisoning where predators or scavengers, e.g. bobcats, raptors, and even pets eat poisoned rodents and die or become sick from ingesting the poisoned rodents.

Please do not make any changes to the regulations that would give exemptions for the use of rodenticides and roll back protections gained by state legislation in 2020, 2023, and 2024.

Thank you!
