> Are any refinements to exempted sites needed?

Please do not loosen restrictions on rodenticide use!!! Rodenticides are harmful not just to rats but also to the predators that eat them AND to the soil & water where these predators and rats end up in after their deaths. We dont even have a proper sewage infrastructure which means all sewages goes to the ocean when there is heavy rain. All of this rat poison is going to end up in the fish in the ocean that are being served in these fancy "local" restaurants that many of the leaders of this state eat at.
