I strongly urge DPR to keep the current protections in place—no anticoagulant rodenticides should be allowed except during a declared public health or environmental emergency. Rolling back AB 1788, AB 2552, or AB 1322 would be a huge step backward. These poisons don't just kill rodents—they also harm owls, hawks, and other predators that naturally control them. Californians have made it clear we want safer, ecological solutions, not more poison in our environment.
