

## Carol Garberson

We strongly object to the use of anticoagulant rodenticides around residential areas businesses, stores, restaurants or anywhere else. They kill a lot of owls, hawks, cats and more - anything that eats the poisoned rodents.

No exceptions except in the case of genuine public health emergencies. Please use integrated pest management practices, snap or electric traps instead of poison. Require pest companies to have training in alternative rodent and other pest management.

We are losing biodiversity at an alarming rate. Please stop the use of anticoagulant rodenticides.
