

Paul Wellin

California does not need to rely on cruel, outdated poisons. Expanding their use, especially in areas like restaurants and grocery stores where these poisons are currently prohibited, would undo years of progress and undermine California's landmark wildlife protections.

All anticoagulant rodenticides should be banned and should not have exemptions for them expanded. Even with existing restrictions, anticoagulant rodenticides continue to kill and harm non-target animals — including mountain lions, bobcats, owls, and endangered San Joaquin kit foxes — through painful internal bleeding by secondary poisoning. Allowing use for more than 100 days per year, as proposed, would recklessly increase exposure and ecological harm.

In rare, verified emergencies, DPR already has the authority to allow limited exemptions, ensuring that genuine public health threats can still be addressed responsibly.
