

Leon Wozniak

TRF applications in Nursery/Greenhouse situations must follow strict re-entry protocols. Similar or stronger protocols should be followed when a TRF is used inside a private or public facility.

TRF applications are conducted in the direction of a house fumigation.

I believe that TRF's are a very valuable tool for controlling pests but the application should be made (and followed up by) a licensed structural pest control operator.

Re-entry and application protocols should be followed by licensed personnel.
