

## Linda Shepard

Do NOT put on anymore restrictions for air quality. I would prefer the current restrictions be reduced.

I am concerned that there is no transparency and accountability in how emissions budgets are set and enforced. Changes in requirements are made so budgets based on "predictions" will agree to one another.

The agency is certainly partisan as it calls out in its own overview that Federal law changes are "illegal". Specifically: "In June of 2025, the current federal administration adopted illegal congressional resolutions". Well, CONGRESS across the nation did not like be bullied into submission by California laws.

I live in CA. I am forced to live under draconian laws in this totalitarian government state. The agencies have put so much unrealistic pressure on businesses and consumers that businesses and residents are fleeing.

Think back to Covid19 restrictions. Air quality improved in just DAYS. That tells me that we have not and are not causing irreparable harm to our environment. Meanwhile, you DO cause irreparable harm to businesses, people's livelihood, and to the State's economic future. Enough with regulations already!!
