

Rick Verbanec

The Advanced Clean Fleets Zero Emission Vehicle regulation should not result in a degradation to the ability of local Spacial Districts to provide the services they deliver to constituents. Support vehicles for fire, police, and sanitation services, among others, must be kept available for the primary service to be viable. Otherwise they would not be there. Restriction of such availability is essentially a state government edict that the local service is not always necessary, an unjustified slap in the face of constituents that have chosen to pay for them.
