

Mary Elizabeth

Thank you for supporting efforts to further improve air quality in California. Like I say to folks in Stockton, not every Census Tract is created equal. All over California there are communities experiencing these same realities and I believe that the Consultation Group Charter that is under consideration is a strong first milestone as the Community Air Protection Program implementation is under consideration. These considerations of implementation strengths and weaknesses will help to create conditions for serious improvements as the Community Air Protection Program is implemented to achieve clean air for ALL!
