I am a parent and a taxpayer, and the quality of the water coming out of our taps in our housing development is something I think about every day.

After a main break the water looked like weak tea for almost two days before it cleared.

Laundry that should come out white sometimes ends up with orange or gray stains.

Lead pipes and solder in older plumbing remain a serious risk, and homeowners need help identifying them.

Radon and uranium in groundwater can be a hidden problem, and I do not think residents are informed enough.

Emergency repairs are fine, but a long-term capital plan would prevent so many of these problems.

Sampling locations should include older neighborhoods and not just the sites that are easiest to reach.

Renters like me cannot replace pipes or fixtures, so we depend completely on the quality delivered to the building.

At the last community meeting, many people raised their hands when asked if they use a filter at home.

Environmental groups in the region have valuable data, and I think the utility should partner with them more openly.

I would like to be notified of any follow-up meetings or public hearings on this topic.
