

Matthew Hall

Dear Bernice Manuelito,

As a long time resident of Arizona who loves to hike and enjoy the stunningly beautiful natural areas of this state, I try to keep abreast of any developments and projects that may harm not only the beauty but the environmental health of those areas and the surrounding human communities. So I'm writing today in regards to the Copper World Project's Draft Aquifer Protection Permit No. 513690, LTF 90620. I really appreciate the opportunity to be able to submit comments on this. So thank you! After reviewing the issues at hand, I find I agree with the Center for Biological Diversity on this issue and am submitting as my comments their detailed letter to the Arizona Department of Environmental Quality:

Thank you for the chance to submit comments on the Copper World project's draft aquifer-protection permit. I'm concerned that the plan design proposed in Hudbay Minerals' application is significantly less protective of Arizona's public health, environment and groundwater than the designs submitted by the previous owners of the Rosemont Mine.

Hudbay Minerals' application proposes to use water to convey tailings in a slurry pipeline, operate an unlined tailings facility, leave waste-rock dumps uncovered at closure, and deploy inadequate monitoring systems. The planned processing facilities, including a heap leach for processing significant amounts of acid, will be much closer to Tucson and Sahuarita's municipal water supplies and rural domestic wells than previously suggested.

The current draft permit proposed by the Arizona Department of Environmental Quality appears to be dangerously indulgent of the polluter at the expense of people and the environment. That's unacceptable. So I request that the Arizona Department of Environmental Quality protects the state's water and public health by including the following stringent requirements in the aquifer-protection permit:

1. Hudbay Minerals must complete an economic and practical evaluation of tailings-storage facilities alternatives, including a lined and dry-stacked facility, among other potential redesigns.
2. Hudbay Minerals must include the entire east pit and the headwaters of small streams near the Broadtop Butte and Copper World pits in the Pollutant Management Area for Copper World's Phase 1, which will provide the best chance of detecting contaminants.
3. Hudbay Minerals must establish two additional point-of-compliance wells to ensure that the east-side aquifer isn't impaired by operations at the east pit.
4. The Arizona Department of Environmental Quality must define a minimum frequency of waste-rock acid content analysis for continued operations following the first year.
5. Hudbay Minerals must submit to biannual rather than biennial monitoring of the expanded list of parameters listed in Table 20 in the APP — which will aid in detection of pollutants that may otherwise go undetected for too long and delay an investigation into the pollution and the implementation of a remedy.

Finally, I request better deployment of industry-standard technologies by Hudbay Minerals for minimizing pollution, and I ask that the Arizona Department of Environmental Quality require the

additional permit conditions, requirements and agency reviews detailed in the technical comments submitted by Pima County staff to your agency on March 11, 2024.

Thank you again for the opportunity to submit comments on this project.

Sincerely, Matthew Hall AZ 86002-2273
