We are a sustainably grown farm in Orange County, NY. We grow in muck soil, where the weeds grow thick. We are committed to using sustainable growing methods, and we are reducing our tillage to help rebuild the soil life. We want to apply for organic certification. We rely on a paperpot transplanter to help us beat the weed pressure, and to help our hand scale farm to run efficiently. The paperpot transplanter has completely transformed how much food we are capable of growing. Adopting this rule will allow us to apply for organic certification and not have to make a choice between that certification and our farm's viability. Thank you for your time.
